

The only Paint made which has a guarantee to give satisfaction on every package.

To ascertain the amount of Paint you require,

Add the number of feet in width to the number of feet in length [both sides:] this multiplied by the average height, gives the number of square feet to be painted. This divided by 200—as one gallon of this paint covers 200 square feet, [TWO COATS,] gives the amount required in GALLONS.

[EXAMPLE]

Front, 20 ft.	120 ft.
Rear, 20 " [Multiply] Height,	20
Side, 40 "	
Side, 40 "	200)2400

120

12 gals. for 2 coats.

This is an approximate estimate. Should the surface be smooth and hard, less will be required; if rough, more.
